

CAPTURAPP:

Catch registration and management of hunting grounds in Castilla y León

CURRENT PROBLEMS:

-  New legislative framework with new needs
-  There is currently a complex communication between parties
-  The absence of real-time records misleads on the state of the environment
-  The offer of certain areas does not reach all the potential public

OWNERS:

- The hunting owner checks and validates the catches from the web platform
- The owner can publish his hunting offer to increase his target audience
- Simplification of the hunting owners' procedures with the public administrations
- Improved decision making by the public administration

HUNTERS:

- Hunters electronically record a catch in real time
- Hunters can review their catch associated with each hunting ground
- Hunters can request access to new hunting grounds.
- Hunters can search for a specific hunting offer through the app (by species, by area and by hunting modality).

FOREST AGENTS:

- Review of information associated with each hunter in the field by QR code (avoiding all paperwork)
- Future implementation of electronic tags
